

Mining for data gold: How to recycle imperfect EMR data into useful information

AFHTO conference
October 15 2014

Danyal Martin, Michelle Greiver, Dave Barber, Marjan Moieindin, Laura Cassidy

Canadian Primary Care Sentinel Surveillance Network
Réseau canadien de surveillance sentinelle en soins primaires

Agenda

➤ What is known?

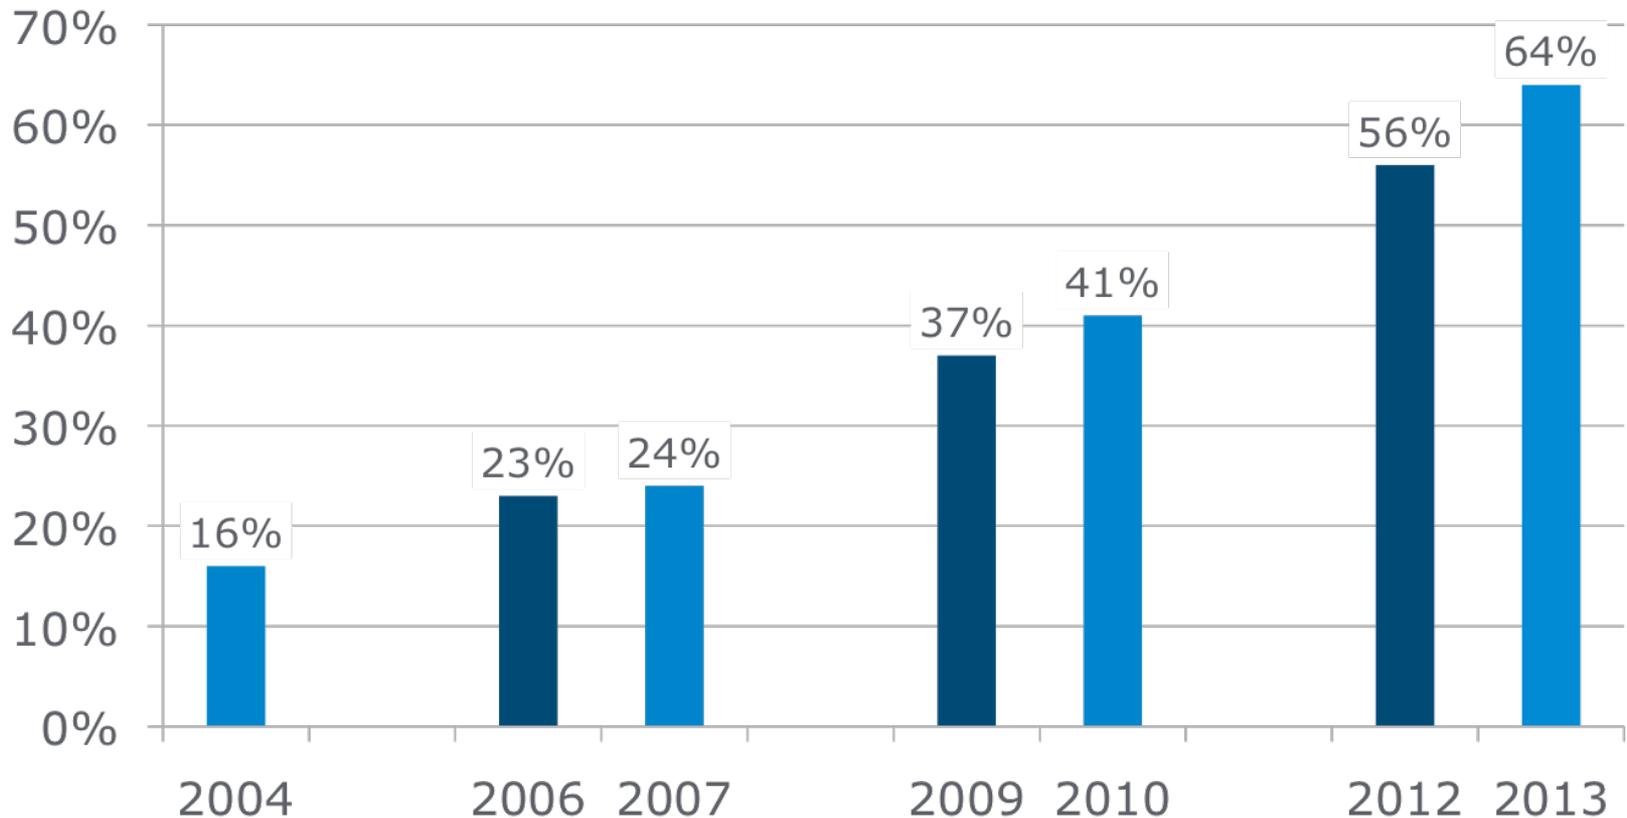

- EMRs are increasingly used, BUT
- Data quality is highly variable;
- This may make mining data (getting usable and useful information) difficult
- Lack of information may **impede efforts to improve care** (you can't improve what you don't measure)

➤ What are we adding?

- An overview of tools and resources to access and use existing data: “mining for gold”
- Some suggestions for improving the data in your EMR to make it more useful and usable

Primary care growth of EMR use – Canada

Primary care physicians reporting EMR use

Data from Commonwealth Fund (2006, 2009 & 2012) and National Physician Survey (2004, 2007, 2010 & 2013)₃

Value of EMRs

- EMRs are now used by the majority of primary care physicians.
- \$\$\$ and time spend on subsidizing, buying, implementing, certifying EMRs.
- Evidence that this has **made difference in care or outcomes** for patients?
- Meaningful use of EMRs or of EMR data?
- Measurement and use of information in primary care teams?

- Was there a **difference** in the change in **preventive services** targeted by Ontario's P4P incentives between community-based family physicians **implementing EMRs** and those using paper-based records?

0.7% less increase in services in EMR group
($p=0.55$, 95% CI -2.8 , 3.9)

NO difference between EMR and paper

Greiver M, Barnsley J, Glazier RH, Moineddin R, Harvey BJ.
Implementation of electronic medical records: effect on the provision of preventive services in a pay-for-performance environment. *Canadian Family Physician* 2011.

•Data quality poor

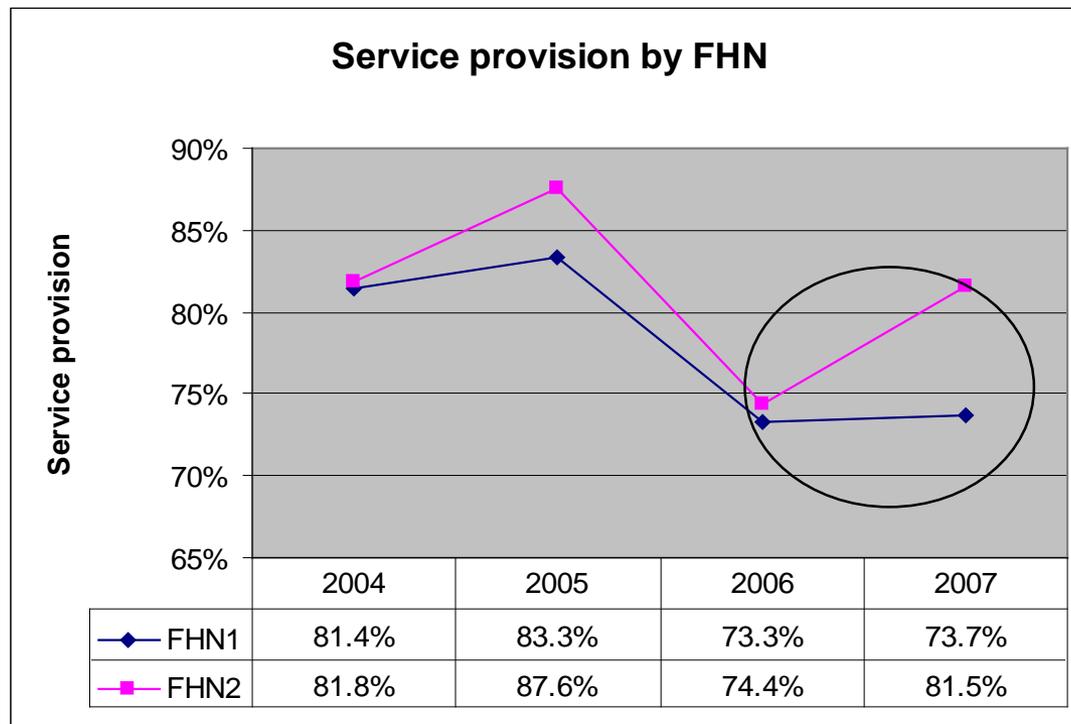

Greiver M, Barnsley J, Glazier RH, Harvey BJ, Moineddin R Measuring data reliability for preventive services in electronic medical records. BMC Health Serv Res. 2012 May 14

Smoking status as extracted from EMR:

“A FEW
smoked
past
stoped
somker”

We don't know who smokes!

Preventive services for 2 groups implementing at the same time

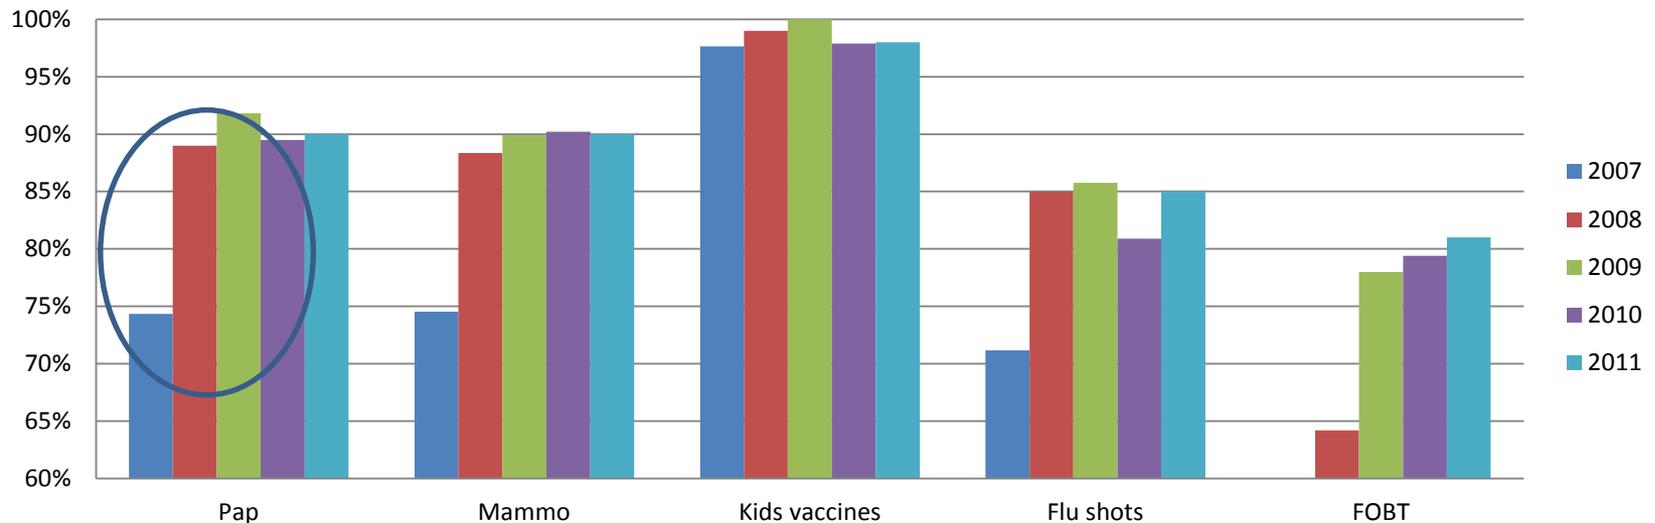

Organization and EMR use at group level for preventive services: standardized processes and data

- Hire group administrator to run program.
- "Clean up" EMR database for the whole group
 - Active patients, roster status
 - Improve data: enter data in consistent manner and in consistent field
- Consistent group processes: **point of care alerts** for group, **standardized reminder mailings** to patients every 3 months

From Individuals to Teams

- QI traditionally targeted at **individual physician**.
- Need Team-based standardized data and processes to obtain larger, systematic, sustained improvement.
- Six sigma: **minimize variability, improve processes**

Example: North York FHT

- 71 physicians
- 40 Allied Health Providers
- Over 220 EMR users
- **2 EMRs (Nightingale, Practice Solutions)**
- **6 servers, 6 databases**
- 18 sites
- **70,000 patients**

Where we started

- **Individual** cases of Excellent Care in some practices, BUT:
Nearly every physician had **their own way** of entering data and doing things:
 - **No consistent reminders or alerts** across many offices;
 - Very **difficult to build disease registries** (example, diabetes).
- Allied Health Providers had to learn **different** ways of **doing the same thing**:
 - Difficult to plan consistent programs or implement consistent approaches to care.

Reflections On Our FHT

- Are we truly working as a **Team**?
- Are we using **EMR to its full potential** or as an electronic paper chart??

Organizational Level

Team-based Approach

Information Management Infrastructure

Privacy Infrastructure

Organizational level Information management infrastructure

- Technical working groups
- Data standards
- Data Warehousing
- Analytic software

- Reports to FHT, Ministry, others
- Information for Board

Data standards

Step 1: **Agree** on standardized data

- Example: consistent, **coded** data, so we could identify patients with chronic diseases
 - **Diabetes ICD9 250**
 - **Hypertension 401**
 - **COPD 496**
 - **Asthma 493**
 - **Depression 311**
 - **CHF 428**

Data standards

Step 2: **Implement** data standardization

- Data entry clerks
- Train everyone
 - EMR education (Lunch and Learn)
- Manuals (posted on Dropbox)
- Communication:
 - Emails, emails
 - All FHT meeting

What are your FHT's goals?

- Improving access/quality of care?
- Do you think having accurate and standardized data is needed to meet your goals?

It takes work to improve data

- Decide if you want to improve and standardize your data for your FHT
- Then take advantage of the processes and tools available

Tools available

- CPCSSN Data Presentation Tool (DPT)
- University/academic projects (various)
- Data projects (Example, ALIVE)
- Local projects and processes

British Columbia

- BCPCReN, Vancouver-*Wolf*, *OSCAR*

Alberta

- SaPCReN, Calgary – *MedAccess*, *Wolf*
- NaPCReN, Edmonton & Yellowknife – *MedAccess*, *Wolf*

Manitoba

- MaPCReN, Winnipeg–*Jonoke*

Ontario

- UTOPIAN, Toronto– *Practice Solutions*, *Bell EMR*, *Nightingale*
- DELPHI, London– *Healthscreen*, *OSCAR*, *Optimed*
- EON, Kingston– *P&P*, *OSCAR*, *Bell EMR*, *Nightingale*
- CPCSSN@Mac, Kitchener & Hamilton
 - *OSCAR*, *Practice Solutions*

Québec

- RRSPUM, Montréal–*Da Vinci*, *Purkinje*

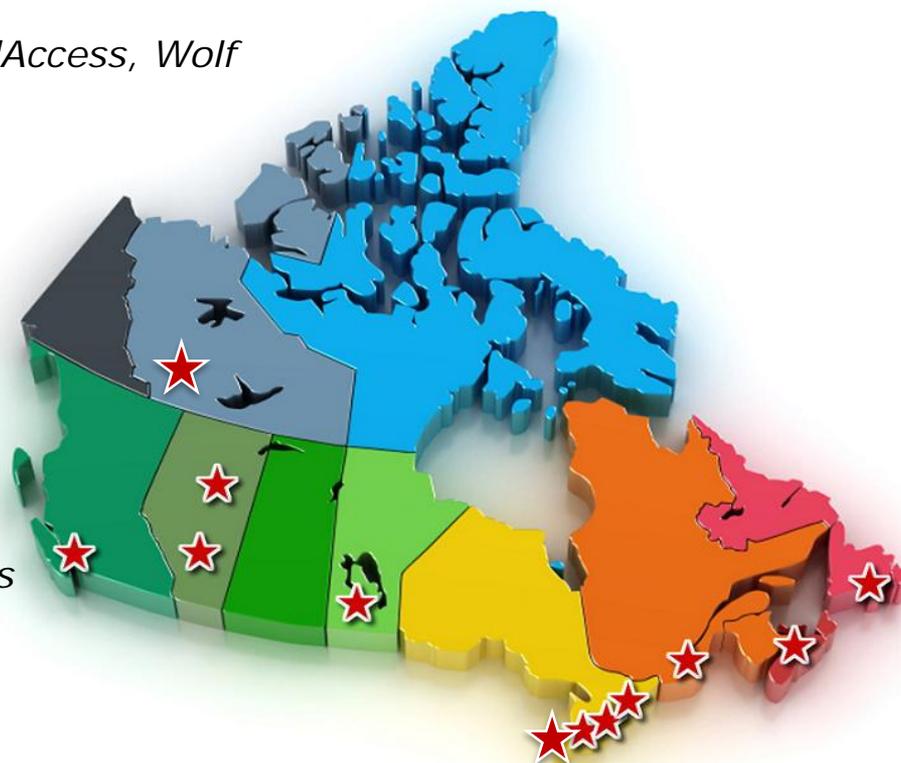

Nova Scotia

- MARNet-FP, Halifax–*Nightingale*

Newfoundland

- CPCSSN-NL, St. John's–*Wolf*, *Nightingale*

11 PCPBRNs, 12 EMR vendor products*, serving 7 provinces and 1 territory

Clinicians and Researchers collaborating on a national project

What if:

We could **send cleaned data back** to a primary care organization?

Along with data mining software (DPT)

So they can produce reports

Using **their own data**

Implementing a Scalable Tool for Quality of Care Improvement in Primary Care

- Partners: CFPC, CPCSSN, University of Victoria, Canada Health Infoway (as strategic investor) and NYFHT
- Return **CPCSSN cleaned, transformed and merged** data to NYFHT
- **Provide software (DPT) to FHT**, in order to give FHT ability to generate own reports

1. Develop a standardized **Quality Dashboard** for front line providers.
2. Improve **data quality** at the practice level.
3. Develop a process to safely **re-identify patients** within the circle of care for tracking and follow-up.
4. Develop **scalable processes** to enable the active use of data for QI projects.

- 5 Chronic diseases: Diabetes, Hypertension, COPD, Dementia, Heart Failure
- Use CPCSSN validated case definitions; use billing + SNOMED CT for Heart Failure.

DPT SEARCH RESULTS

Diabetics that do not have 250 in CPP (n: 797)

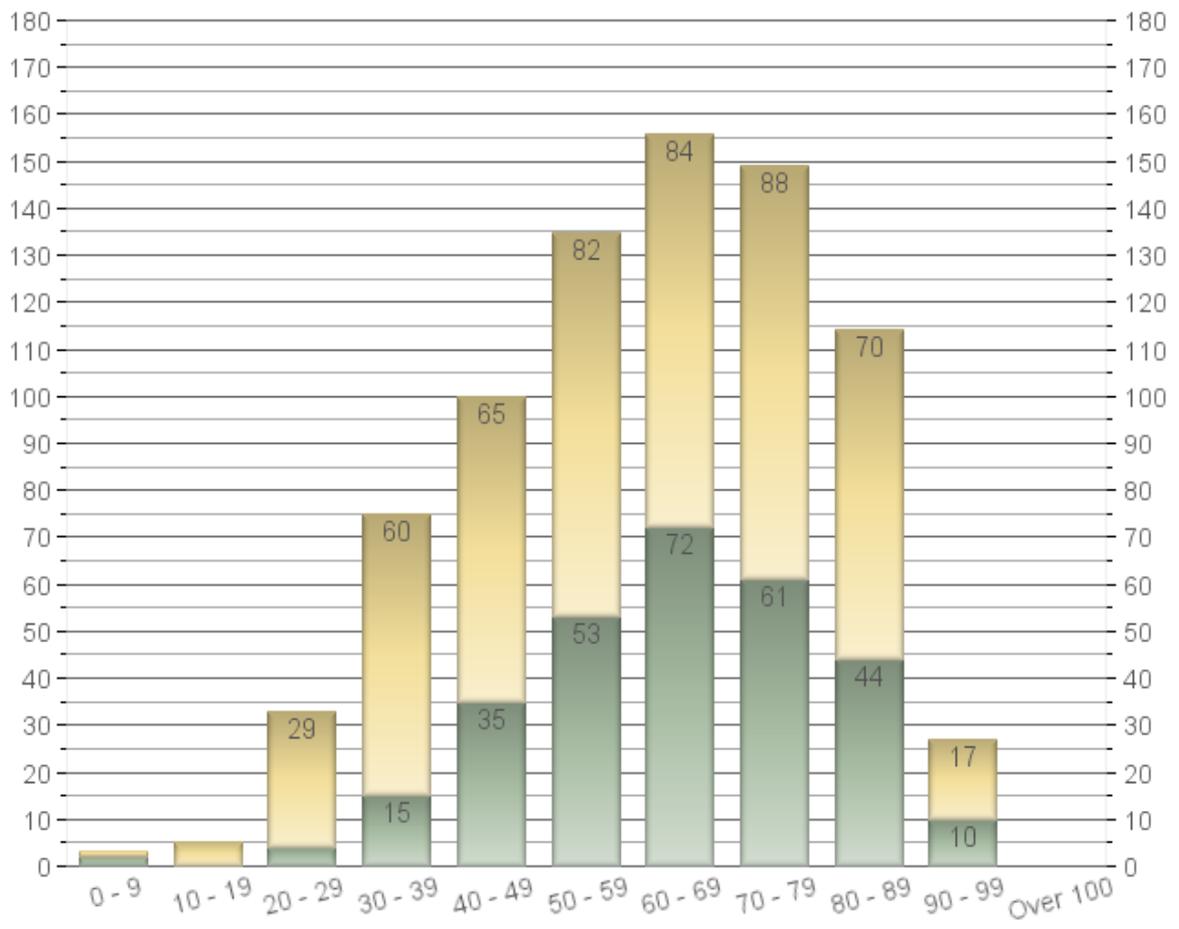

Total Pts: 797

		Male	Female
0 to 9	3	2	1
10 to 19	5		5
20 to 29	33	4	29
30 to 39	75	15	60
40 to 49	100	35	65
50 to 59	135	53	82
60 to 69	156	72	84
70 to 79	149	61	88
80 to 89	114	44	70
90 to 99	27	10	17
Over 100			

Total Patients includes sum of Male, Female and Unknown gender

Diabetes Mellitus	797	- 100.0%
Depression	156	- 19.6%
Hypertension	301	- 37.8%
COPD	49	- 6.1%
Osteoarthritis	127	- 15.9%
Dementia	43	- 5.4%
Parkinsons	8	- 1.0%
Epilepsy	10	- 1.3%

Males Females Unknown

- Physicians verify data (has diabetes yes/no)
- Data clerks add code to EMRs
- Patients: Active, at least 1 visit past 3 years.
N = **60,652**
- Results (baseline), missing, uncoded or unstandardized data in CPP:
 - Diabetes: **19%** (797 / 4271)
 - Hypertension: **37%** (3762 / 10,246)
 - COPD: **83%** (1092 / 1318)
 - Dementia: **71%** (711 / 1000)
 - Heart Failure: **43%** (180 / 415)

Overview of verification for 59 providers

Condition	# verified	% verified	# +ve for condition	Already coded in CPP
Diabetes	641	80%	217	3474
Heart failure	133	74%	74	235
HT	2392	64%	1494	6484
COPD	929	85%	336	226
Dementia	610	86%	276	289
Total	4705	72%	2397	10708

Percentage increase in coding: **22%**

- In 2014, we coded:
 - 9 health conditions
 - 3 Cancers
- Total coded: **2,007** conditions

- Family history for 3 cancers (breast, colorectal, ovarian)
- Total coded: **7,166** family history problems

- We mailed **5,055** reminder letters for preventive services, roster invitations, diabetes overdue services

- **Manual available**

4 Conditions	50	-	1.1%
Over 4 Conditions	7	-	0.2%

- Privacy Impact Assessment
- Threat Risk Assessment
 - Contractual Safeguards (i.e., MoA for data use)
 - Protect workstation containing Personal Health Information
 - Encryption
 - Security and Privacy training

- **Privacy Impact Assessment documents**
 - Provided to AFHTO, available in member's area of website
- **Handbook of Data Cleaning activities**
 - Summer student manual
 - For Practice Solutions EMR, Nightingale EMR
 - Available on demand and from AFHTO
- Manual for **preventive services management**
- **No Charge**

- 1. Data quality** can be improved at the practice level
- Patients can be safely **re-identified** within the circle of care for tracking and follow-up
- 3. Scalable processes** can be implemented to enable the active use of data for QI projects

Healthcare Analytic Adoption Model

Level 8	Cost per Unit of Health Reimbursement & Prescriptive Analytics	Contracting for & managing health
Level 7	Cost per Capita Reimbursement & Predictive Analytics	Taking more financial risk & managing it proactively
Level 6	Cost per Case Reimbursement & Data Driven Culture	Taking financial risk and preparing your culture for the next levels of analytics
Level 5	Clinical Effectiveness & Population Management	Measuring & managing evidence based care
Level 4	Automated External Reporting	Efficient, consistent production & agility
Level 3	Automated Internal Reporting	Efficient, consistent production
Level 2	Standardized Vocabulary & Patient Registries	Relating and organizing the core data
Level 1	Data Integration – Enterprise Data Warehouse	Foundation of data and technology
Level 0	Fragmented Point Solutions	Inefficient, inconsistent versions of the truth

- We **demonstrated** that returning data to a FHT for QI, reporting and improving data quality **was feasible**:

“You can’t improve what you don’t measure”

- DPT has now been provided to **QIDSS** for **clusters of FHTs**.
- **Current** data in EMRs are **good enough** to mine; use what is available to you, **and**
- **Improve your data**
- **Better data = Better care**

Thank you!
