

D2D 2.0 – Cancer screening searches for Telus PS

Cervical (Pap) Data

In Telus PS the **preventive care summary report** can be used for cervical screening rates.

Colorectal Screening Data

The colorectal screening rates from the preventive care summary report should not be used (criteria for colorectal screening does not match the SAR criteria – there's an issue with exclusions).

Below is an example of the search that will find all rostered patients with up-to-date colorectal cancer screening (this is the numerator).

For the denominator create a search with the Member Status and Age criteria only.

To create a search for ALL eligible patients just remove Member Status from the criteria.
