

Manual Cleaning of the Childhood Immunization Health Maintenance Compliance Report for Nightingale

Step 1: Access the Health Maintenance Compliance Report

In the Reports tab, select Custom.

Step 2: Select desired fiscal year and provider, and click View Report.

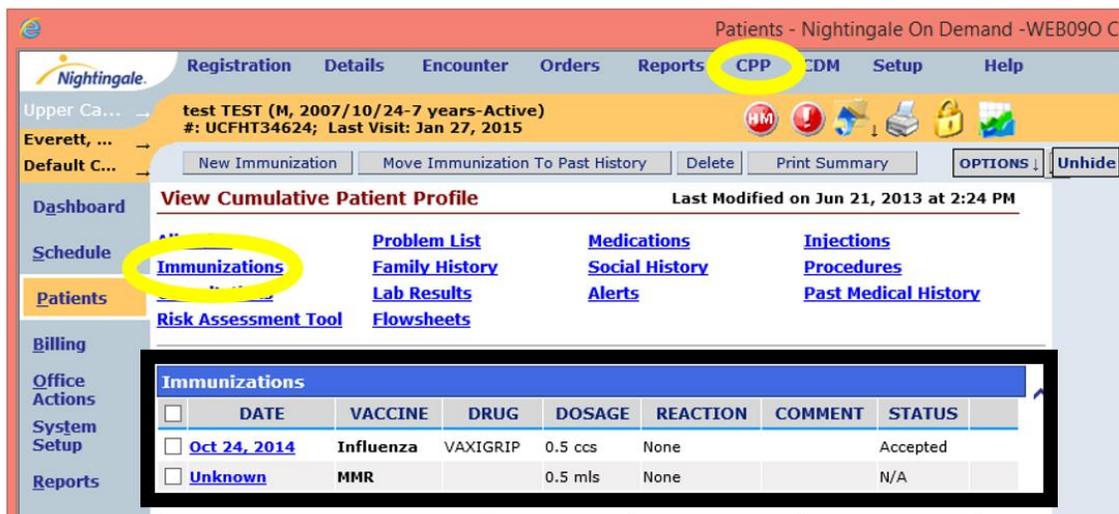

Step 3: Manual review of CPP for patients with “Not Yet Immunized” under Notes

Once you enter patient’s chart, select CPP, and once in CPP, select immunizations (or scroll down to immunizations).

Manually count the number of immunizations the patient has received, they require the following to be considered fully immunized for the Preventative Care Bonus.

- 4 of DTaP-IPV-Hib - paediatric (PEDICEL or PENTACEL)
- 3 of Pneumococcal Conjugate (PREVNAR or PNEUMOVAX)
- 1 of Measles, Mumps, Rubella (MMR) (MMR2 or PRIORIX)
- 1 of Varicella (VARIVAX or VARICELLA)
- 1 of Meningococcal C Conjugate (Men-C) (MENJUGATE)

If patient meets the criteria, move on to Step 4. If they do not meet the criteria, no action is required.

Step 4: Mark patient as Completed.

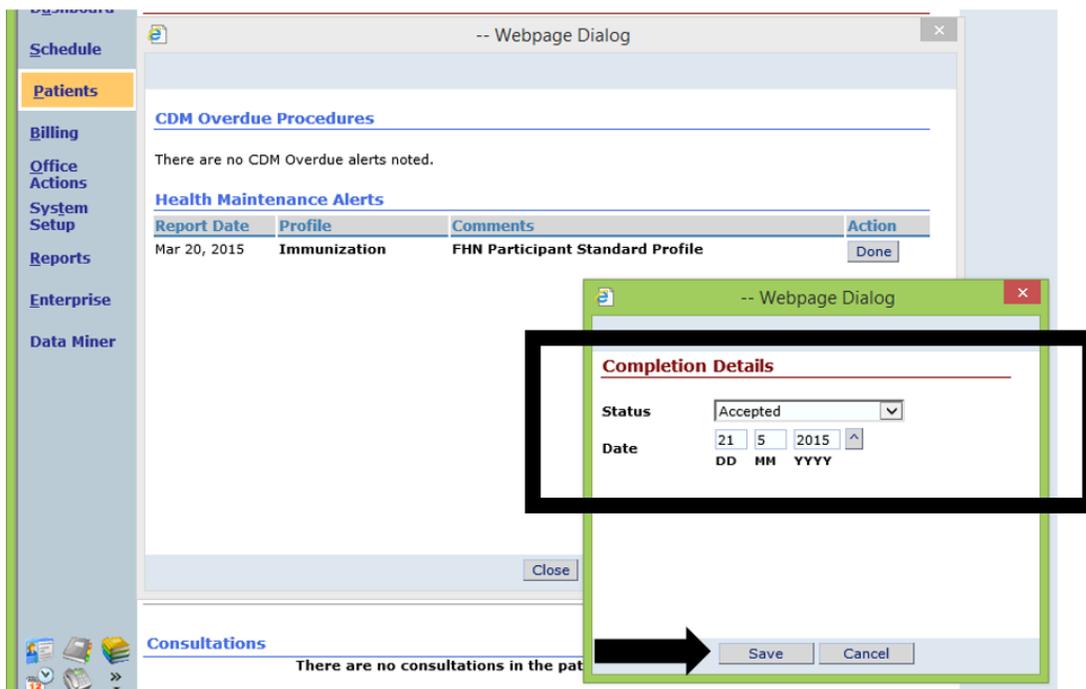

Select the “HM” (Health Maintenance) button.

In the HM box that opens up, you can see that the patient has a Health Maintenance Alert for Immunization. Under Action, Select Done.

In the new box that opens, ensure “Accepted” is in the status box, meaning the patient meets the immunization criteria. In the date box, put in the date of the most recent immunization **from the list of eligible immunizations**. For example if influenza was the most recent immunization, you would not put that immunization is, as it is not on the preventative care bonus list. If the immunization was after the “cut-off” date, they may not be eligible for the bonus for the fiscal year you are entering information in. Then select save. When you refresh the report, the patient’s note will now state “Completed”, if the immunizations were completed in the cut-off period.

Step 5: Excluding a patient from the report (when patients move, are derostered, are inactive, or medically unable to have immunizations, etc.)

Under the CPP, Select Procedure.

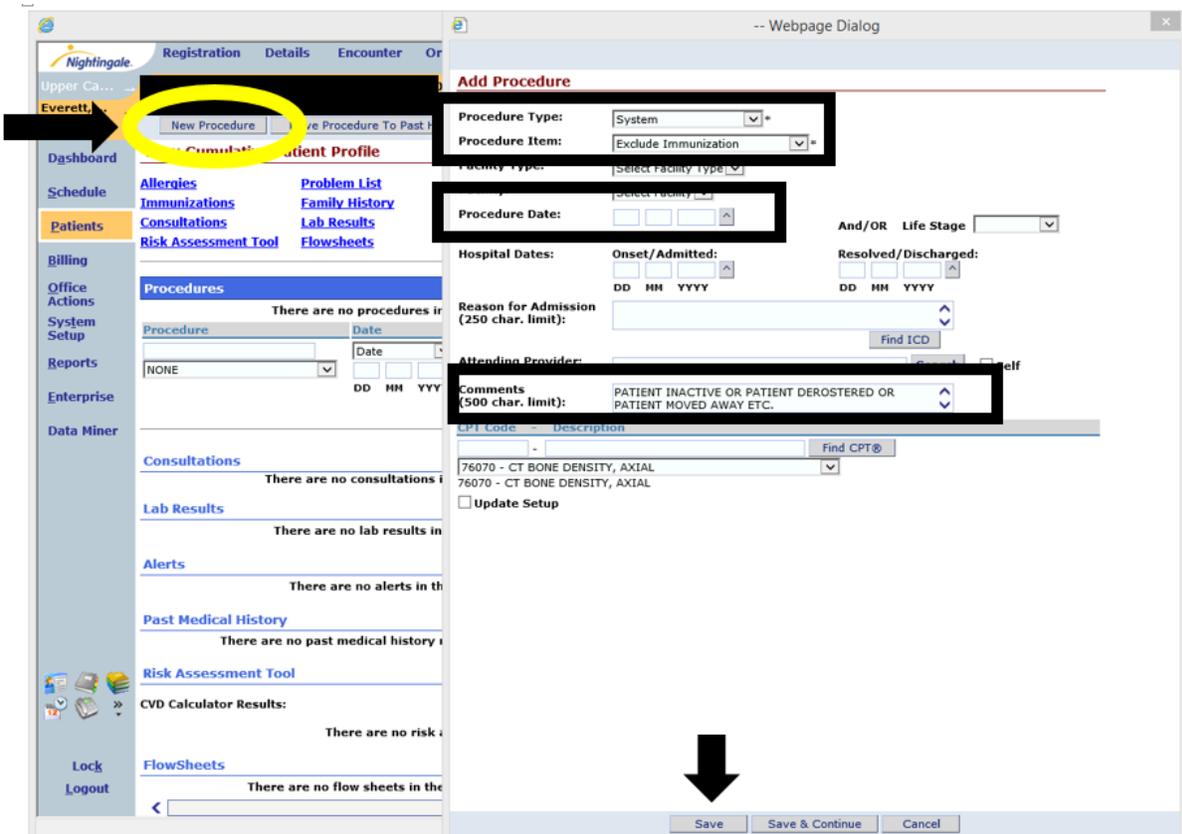

Then select "New Procedure" at the top of the screen.

In the Add Procedure box, do the following;

- Procedure Type – Select 'System'
- Procedure Item – Select 'Exclude Immunization'
- Procedure Date – Input the date the patient was excluded (date patient moved away, date patient was derostered, date patient was made inactive or is unable to have immunizations, etc.)
- In the comments section, indicate reason why patient is being excluded from reports

Select the Save button at the bottom of the box.

When you refresh the Health Maintenance Compliance Report, the patient should now have the note “Immunization: Not targeted”.

Health Maintenance Compliance Report (Immunization)

April 1st 2014 - March 31st 2015

Patient	HCN	Age	Bonus	Notes
		35 m	Y	Completed
		40 m	Y	Completed
		33 m	Y	Completed
		35 m	N	Not yet immunized
		31 m	N	Not yet immunized
		41 m	N	Not yet immunized
		40 m	I	Immunization: Not targeted
		31 m	Y	Completed
		40 m	Y	Completed

5 out of 8 targeted patients are compliant. 62.50% compliance; No bonus to date

Additional Information:

There is a note that has displayed a few times for patients with varying providers displayed as “> 30 months old at LPD” – Nightingale does not know why this is displaying, and even if these children are fully immunized, changing their status following the steps above does not reflect a change in the compliance report. There is a ticket open with Nightingale regarding this issue.
